Self Order Kiosk
Order yourself and get it the way you like it.

You don't have to be a large, national chain to be able to afford the benefits of kiosk ordering. The Self Order Kiosk app can be loaded onto stationary iPads anywhere in the restaurant. The deceptively simple kiosk software prompts customers through the ordering process and accepts credit card, gift card, or pay at cashier orders. Customers using Self Order Kiosk can bypass counter lines for faster, more accurate order entry.

Key Merchant Benefits

- Better Accuracy because guests take full control and responsibility for their orders

- Increased Revenue because kiosks provide the capacity to service more guests during peak periods

- Improved Services Times as a result of a better better ratio of deployment of labour to service productivity versus order taking

- Lower Labor Cost potential by reducing the number of employees taking orders

- Higher Customer Satisfaction by having employees focus more attention on delivering the highest quality product & service

- Capture Customer Data to gain insights into purchasing behavior

- Easy Ordering to build a new meal or reorder a past meal

- Increased Sales due to customer tendency to upsell themselves more often when provided with a high quality and well designed interactive graphical menu ordering experience
